Applied AI Engineer & Founder @ Mavericks AI | Building Production-Grade Agentic Systems (CrewAI, LangGraph, Vapi) | Deploying Multi-Agent Workflows to solve operational bottlenecks & scale businesses.

Baltimore, Maryland, United States

Summary

I build production-grade AI systems that solve real business bottlenecks. I believe the true value of LLMs isn't just in chat interfaces, but in autonomous, multi-agent workflows that can execute complex operational tasks. As the Founder of Mavericks AI, I've spent my time in the technical trenches architecting and deploying custom applied AI solutions—from voice receptionists handling inbound contractor calls to complex, multi-agent lead-qualification squads. Running an AI automation agency taught me exactly how to map AI capabilities to tangible business ROI. However, it also clarified where my true passion lies: the engineering. I am transitioning from an agency founder to a full-time engineering role because I want to dedicate 100% of my time to building, scaling, and optimizing agentic architectures, rather than managing client acquisition and sales operations. My technical focus spans:

1. Agentic Frameworks: Architecting multi-agent systems using CrewAI and LangGraph.
2. Conversational AI: Deploying production-ready voice agents and optimizing prompt engineering (Vapi).
3. Backend & Automation: API integrations, Model Context Protocol (MCP), FastAPI, and n8n.
4. Deployment: Bridging LLM capabilities with existing business infrastructure and CRMs.

Before diving into applied AI, I spent four years driving agile execution as a Scrum Master at IDEXX Laboratories, backed by an MS in Telecommunications Engineering from the University of Maryland. This foundation gives me a rare blend of deep technical aptitude and the operational rigor required to take complex software projects from prototype to reliable production. I am actively seeking roles as an AI Automation Engineer, AI Solutions Developer, or Applied AI Engineer. If your team is looking for a builder who bridges the gap between cutting-edge LLM capabilities and practical execution, let's connect!

Experience

Digital Marketing Mavericks

Founder

January 2024 - Present (2 years 4 months)

Baltimore, MD

- Architect and deploy autonomous AI voice receptionists (via Vapi AI) for commercial service contractors, engineering complex webhook architectures in Make.com to dynamically parse caller intent and manage live calendar bookings.
- Engineered an internal multi-agent CrewAI pipeline that reduced lead qualification and content generation overhead, eliminating manual data processing and saving ~10 hours/week.
- Deployed automated, multi-channel outbound pipelines handling 500+ targeted B2B interactions monthly, linking technical API integrations to measurable business ROI.

IDEXX LABORATORIES LIMITED

Scrum Master

May 2022 - May 2025 (3 years 1 month)

Baltimore, Maryland, United States

- Led Agile software development practices (Scrum/Kanban) across multiple cross-functional engineering pods of 10+ developers, ensuring reliable delivery of enterprise-grade technical products.
- Facilitated sprint planning, daily stand-ups, and retrospectives, optimizing workflow efficiency and removing technical blockers for CI/CD deployment pipelines.
- Bridged the gap between technical developers and business stakeholders, ensuring engineering outputs aligned with corporate objectives and release schedules.
- Mentored teams on Lean principles to reduce cycle time and improve the quality of software deployments via scrum and kanban techniques.

Citizens

Scrum Master

August 2021 - May 2022 (10 months)

Germantown, MD

Education

University of Maryland

Master's degree, Telecommunications Engineering · (August 2019 - December 2021)
